

Nested Color Restore Regression

Parent colupper stays blue

PARENT-BEFORE should be blue.

Nested child is green

CHILD-1. This paragraph is intentionally ordinary text. It is repeated so that the nested breakable box has to split while the parent box continues afterwards. The parent text after the nested box must still use the parent color, not the nested child color and not the document default color.

CHILD-2. This paragraph is intentionally ordinary text. It is repeated so that the nested breakable box has to split while the parent box continues afterwards. The parent text after the nested box must still use the parent color, not the nested child color and not the document default color.

CHILD-3. This paragraph is intentionally ordinary text. It is repeated so that the nested breakable box has to split while the parent box continues afterwards. The parent text after the nested box must still use the parent color, not the nested child color and not the document default color.

CHILD-4. This paragraph is intentionally ordinary text. It is repeated so that the nested breakable box has to split while the parent box continues afterwards. The parent text after the nested box must still use the parent color, not the nested child color and not the document default color.

CHILD-5. This paragraph is intentionally ordinary text. It is repeated so that the nested breakable box has to split while the parent box continues afterwards. The parent text after the nested box must still use the parent color, not the nested child color and not the document default color.

CHILD-6. This paragraph is intentionally ordinary text. It is repeated so that the nested breakable box has to split while the parent box continues afterwards. The parent text after the nested box must still use the parent color, not the nested child color and not the document default color.

CHILD-7. This paragraph is intentionally ordinary text. It is repeated so that the nested breakable box has to split while the parent box continues afterwards. The parent text after the nested box must still use the parent color, not the nested child color and not the document default color.

CHILD-8. This paragraph is intentionally ordinary text. It is repeated so that the nested breakable box has to split while the parent box continues afterwards. The parent text after the nested box must still use the parent color, not the nested child color and not the document default color.

CHILD-9. This paragraph is intentionally ordinary text. It is repeated so that the nested breakable box has to split while the parent box continues afterwards. The parent text after the nested box must still use the parent color, not the nested child color and not the document default color.

CHILD-10. This paragraph is intentionally ordinary text. It is repeated so that the nested breakable box has to split while the parent box continues afterwards. The parent text after the nested box must still use the parent color, not the nested child color and not the document default color.

PARENT-AFTER should still be blue. If this line is black, white, or green, the nested color stack leaked into the parent text.

PARENT-TAIL. This paragraph is intentionally ordinary text. It is repeated so that the nested breakable box has to split while the parent box continues afterwards. The parent

text after the nested box must still use the parent color, not the nested child color and not the document default color.
